### SUMMARY

I engineer scalable, high-efficiency applications by combining a strong foundation in **React** and **Ruby on Rails** with advanced backend architecture in **Java** and **Spring Boot**. My focus is on delivering clean, well-structured code, optimizing **SQL** databases, and designing secure **RESTful APIs**. A proactive problem-solver proficient in **Agile** methodologies, I am ready to contribute to challenging projects in fully remote or on-site environments.

### PROFESSIONAL EXPERIENCE

#### Software Engineer

Dev Tech Labs 2023 - Present Salvador, Brazil

- Game management architecture:** Engineered a raw Java persistence layer using **JDBC** and Oracle DB. Implemented DAO and Factory design patterns to decouple business logic, intentionally bypassing frameworks to master low-level database connectivity.
- Fintech Upside (Full Stack):** Architected a financial management platform with a **Spring Boot** REST API and a Next.js frontend. Implemented complex CRUD operations for transaction tracking and real-time balance updates.
- PortfolioPilot Asset Tracker (Full Stack):** Engineered a hybrid B3 Stocks and Crypto dashboard using **Ruby on Rails**. Optimized backend performance by eliminating **N+1 queries** and implemented **Internationalization (i18n)** within a fully responsive mobile interface.
- NextStore E-Commerce (Full Stack):** Built a robust e-commerce solution featuring dual interfaces for Customers and Administrators. Integrated **Aceternity UI** components within a **Next.js** environment and synchronized complex shopping cart state with a scalable **Spring Boot** backend.

#### Trainee - Software Engineer

Kreativstorm 08/2024 - 09/2024 Berlin, Germany (Remote)

- MoneyQuest (System Design Concept):** Designed the conceptual architecture for a fintech mobile application that gamifies financial savings using the WRSPM model. Developed interactive user engagement mechanics to incentivize healthy financial habits.
- API Architecture Analysis:** Conducted a comprehensive technical review of the Spotify and Google Maps APIs. Mapped endpoints, authentication flows, and data structures to define integration strategies and feature feasibility.
- Security Architecture Case Study:** Conducted a technical post-mortem of the 2018 Facebook Privacy Breach. Analyzed the specific vulnerability chain and proposed architectural mitigation strategies for large-scale distributed systems.

#### International Immersion & Language Proficiency

- Liverpool, United Kingdom:** Achieved C1 Advanced English proficiency through an intensive immersion program. Refined professional communication skills specifically for global collaboration and technical environments.
- Munich, Germany:** Attained C1 Advanced German proficiency through rigorous study. Developed strong intercultural competence and adaptability, demonstrating readiness to integrate into diverse international teams.

### EDUCATION

#### Associate's Degree, Analysis and System's Development

FIAP

2025 - Present São Paulo, Brazil

#### Full Stack Web Development, Coding Bootcamp

Le Wagon

04/2024 - 06/2024 São Paulo, Brazil

### PROFESSIONAL DEVELOPMENT AND COURSES

#### Create REST APIs with Java and Spring

CodeCademy

#### Java Programming II

University of Helsinki

#### Java Programming I

University of Helsinki

### SKILLS

#### Languages

Java, Ruby, JavaScript, TypeScript, SQL

#### Backend

Spring Boot, Ruby on Rails, JDBC, REST APIs, MVC Architecture

#### Frontend

Next.js, TailwindCSS, HTML/CSS

#### Database

Oracle SQL, PostgreSQL

#### Tools

Git, Linux, Agile/Scrum, Design Patterns (DAO & Factory)

### LANGUAGES

#### Portuguese

Native

#### English

C1

#### German

C1
